1. "The Nitro-Química Brasileira C^o is now [August 1953] engaged in Brazil in erecting a whole network of new plants for the chemical industry on plans prepared by Italian firms and with their technical aid. They have been planned on the most up-to-date lines to a large extent under patents taken out by the P.S.P. Progettazioni Co. of the Engineers Sciacca and Piacentini of Bergamo.
2. "The building, assembly, and operation of the several factories are being carried out under the direction of the Brazilian branch of the Companhia Brasileira Sciacca e Piacentini, of which all the engineers and experts are Italians.
3. "The factories now being erected with the collaboration of the Italian and Brazilian companies are:

An aluminium factory (30 tons per day)

Liquid chlorine works (8 tons per day)

A caustic soda factory (75 tons per day)

Works producing sodium sulphide (2 tons per day)

- A concentrated nitric acid works (15 tons per day)

A pure hydrochloric acid factory (6 tons per day)

A bi-calcic phosphate works (70 tons per day)

A hydrochloric acid works for industrial purposes (70 tons per day)

- A synthetic ammonia factory (25 tons per day)

A factory producing plastic materials (4 tons per day) ✓

A factory producing polyvinile chlorine (6 tons per day) ✓

- A plant for producing urea (25 tons per day) ✓

Works producing calcium chloride (20 tons per day)

A cellulose factory (100 tons per day)."
